WE'RE NOT YOUR AVERAGE MSP

Traditional MSPs focus on keeping your network up and running, but depend on you to tell them when things are not running properly. Yes, some proactive work is done, but you rarely hear from them unless there is an issue. They do not have your business goals in mind and you probably just view them as an expense item, not a business partner.

At Layer 9, we focus on helping you move your business forward. We want to, not only be a resource to fix your day to day issues, but to assist in creating solutions that help you meet your business goals. We do this with aligning your company with our technical standards. These standards give you a base line of infrastructure that keeps your business secure, compliant, and running smoothly. We're not your ordinary MSP.

We want to be your partner.

◆ Items are a regulation of either PCI, HIPAA, or DFAR Compliance

◆◆ If Applicable Pen Test is a separate line item as it is run through a 3rd Party Partner
